Session on mockBee for Projects

The recording of this session is in two parts. Please scroll below for second part.

mockBee : mock backend for frontend projects (Session Outline)

The problem

- Why we need mockbee
- How it help us to create full stack projects

Backend basics

- What you need in real backend
- API, request/response, Database, etc

mockBee intro

- Getting Started
- APIs
- Documentation

mockBee Features:

- mockBee gives fake backend api
- Easily configurable and highly customizable
- Provides auth
- Can be extended to have more features
- If you want to create new data api you can just use static data

Testing Mock API

- What is mockman?
- Mockmanjs gives plug and play react component to test mock apis
- As generally you cannot test mock api on real api testing tools like postman
